

# hand stretch tray wrappers

## TW45 RANGE FOR USE WITH STRETCH FILM

These simple to use hand stretch wrap machines incorporate two support rollers for the stretch film to be used and a stainless steel support bridge that allows the film to pass under the product to be wrapped. The electric console features a constantly heated, low voltage cutting wire to cut the film before sealing the bottom of the tray on the stainless steel hot plate. The hotplate features adjustable temperature settings.

Stretch films are available in various widths to suit the product to be wrapped, including meat products, vegetables, fish and fruit. The model TW45 hand stretch wrap machine is available as a white powder epoxy painted machine or full Stainless Steel. It can have the option of a hot wire or stainless steel temperature controlled cutter bar (cold rod).

### GENERAL APPLICATIONS

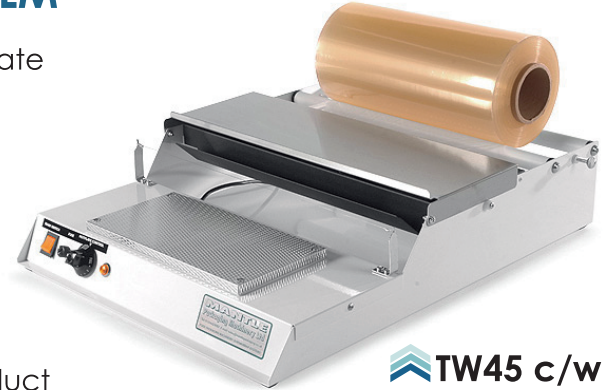

Hand Stretch Wrap machines are extensively used in Supermarkets, Butchers, grocers and contract packers, for wrapping meat, fish, cheese, fruit and vegetables.
